AIM

To design and build a functional “Event Registration Form” application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox — and to model the underlying data structure of a real event-management workflow through a properly sectioned form and an auto-generated report view.

PROCEDURE

1. Data Model Design

Before building the form, the data requirement was analysed and organised into a simple data model, grouping the thirteen Basic Fields under four logical sections that map to the stages of a participant's registration journey: Personal & Contact Details, Additional Information, Scheduling Details, and Event Preferences. Every field submitted through the form flows into a single auto-generated report, Event_Registration_Report, which the organising committee uses to track and manage registrations.

2. Application and Form Creation

1. Logged into Zoho Creator and clicked Create New Application → Create from Scratch.

2. Named the application “Event Registration & Management” and confirmed creation, which opened the default blank workspace.

3. Inside the application, opened the Forms panel and clicked the + icon to add a new form, naming it Event_Registration_Form.

4. This automatically created a linked report, Event_Registration_Report, which lists every submitted registration.

3. Drag-and-Drop of Basic Fields

In the Form Builder, the Basic Fields palette was expanded on the left panel. Each required field was dragged from the palette and dropped onto the canvas in the order needed, then double-clicked to open its Field Properties panel for renaming and configuration, as listed below.

Basic Field	Field Name Set	Drag-and-Drop Configuration
Name	Registrant_Name	Dropped onto canvas; First Name / Last Name sub-fields enabled and filled as “Neha” / “Sewin”.
Email	Email_Address	Dropped below Name; built-in email format validation kept active.

241401059

Basic Field	Field Name Set	Drag-and-Drop Configuration
Address	Correspondence_Address	Dropped in Section A; default Address Line 1/2, City, State, Postal Code, Country sub-fields retained.
Phone	Contact_Number	Dropped below Address; country code format set to India (+91).
Single Line	College_Name	Dropped in Section B; configured as free-text entry.
Multi Line	Additional_Comments	Dropped below Single Line; expanded text area kept at default rows.
Number	Registration_ID	Dropped in Section B; numeric-only entry validated.
Date	Event_Date	Dropped in Section C; date-picker format set to DD-MMM-YYYY.
Time	Preferred_Session_Time	Dropped below Date; 24-hour time format retained.
Drop Down	Event_Category	Dropped in Section D; three choices (Choice 1, Choice 2, Choice 3) added to the list.
Radio	Session_Type	Dropped below Drop Down; three mutually exclusive options added.
Multi Select	Workshops_Selected	Dropped below Radio; multiple choices enabled for multi-pick.
Checkbox	Interested_Activities	Dropped in Section D; three selectable choices configured with a Mandatory-style choice list.

4. Organising Fields into Sections

To keep the form participant-friendly and logically grouped, a Section field was dragged from the Layout palette above each group of related fields, and the dropped fields were nested under the correct section header. Four sections were created in this way:

• Section A — Personal & Contact Details: Registrant Name, Email Address, Correspondence Address, Contact Number.

• Section B — Additional Information: College Name, Additional Comments, Registration ID.

• Section C — Scheduling Details: Event Date, Preferred Session Time.

• Section D — Event Preferences: Event Category, Session Type, Workshops Selected, Interested Activities.

Each section header was renamed by double-clicking it and typing the section title, and fields within a section were reordered using drag handles until the layout matched the intended participant journey from identity to preferences.

5. Applying Field-Level Validations

1. Selected Registrant_Name, Contact_Number, Email_Address, Registration_ID, Event_Category, and Event_Date one by one and enabled the Mandatory toggle in Field Properties.

2. Opened Email_Address properties and confirmed the built-in email format validation was active.

3. Opened Contact_Number properties and set the phone format to the Indian country-code pattern (+91).

4. Opened the Choice list under Drop Down, Radio, Multi Select, and Checkbox and populated each with Choice 1, Choice 2, and Choice 3 for consistent testing.

5. Opened Event_Date properties and restricted selectable dates to today and future dates only, disallowing past dates.

241401059

6. Confirmed the Submit button remains disabled until all mandatory fields are filled.

6. Preview and Deployment

1. Clicked the Preview icon in the Form Builder toolbar to view the live participant-facing form and verified that all four sections render in order with correct field types.

2. Filled and submitted a sample registration through the live form to test validations and generate report data.

3. Opened Event_Registration_Report from the Reports panel and verified that the submitted record appears with values mapped correctly to each field.

4. Verified that the Drop Down, Radio, Multi Select, and Checkbox fields correctly stored single, single, multiple, and multiple selections respectively.

OUTPUT

The following screenshots capture the completed application: the Form Builder showing all thirteen Basic Fields with the Checkbox field properties open, and the live participant-facing form preview showing a submitted sample registration.

1. Form Builder View — All Basic Fields Placed, Checkbox Field Properties Open

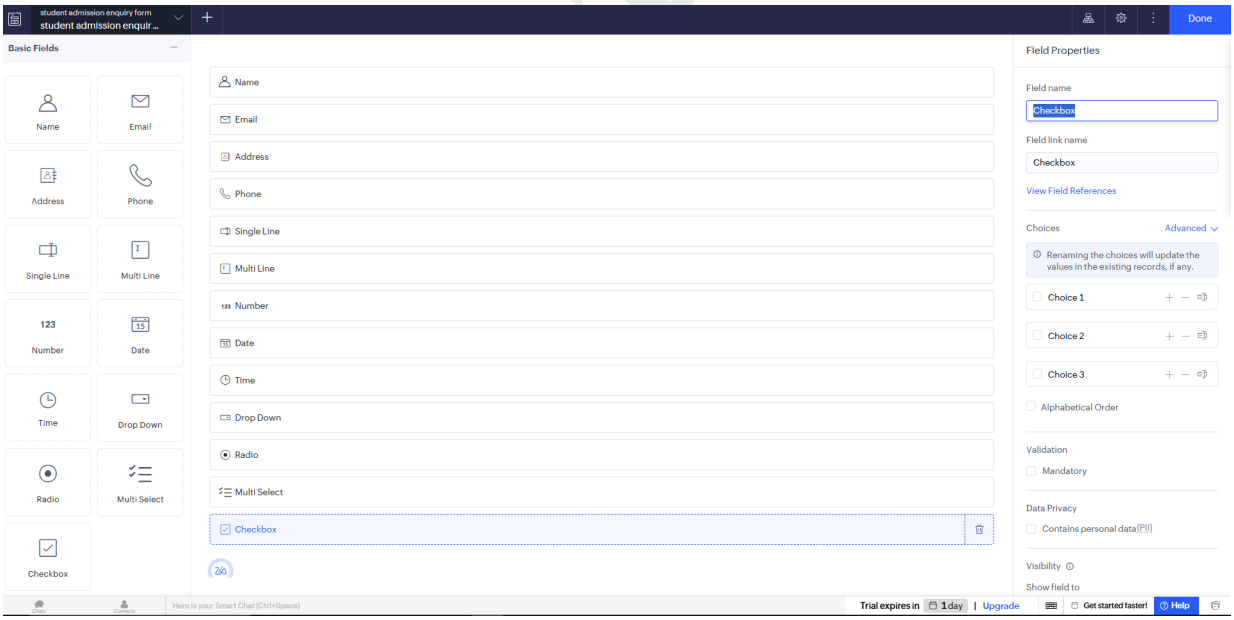

Fig 2. Form Builder — Basic Fields palette with the Checkbox field selected and its Choices configured

2. Live Form Preview — Personal, Contact and Scheduling Details

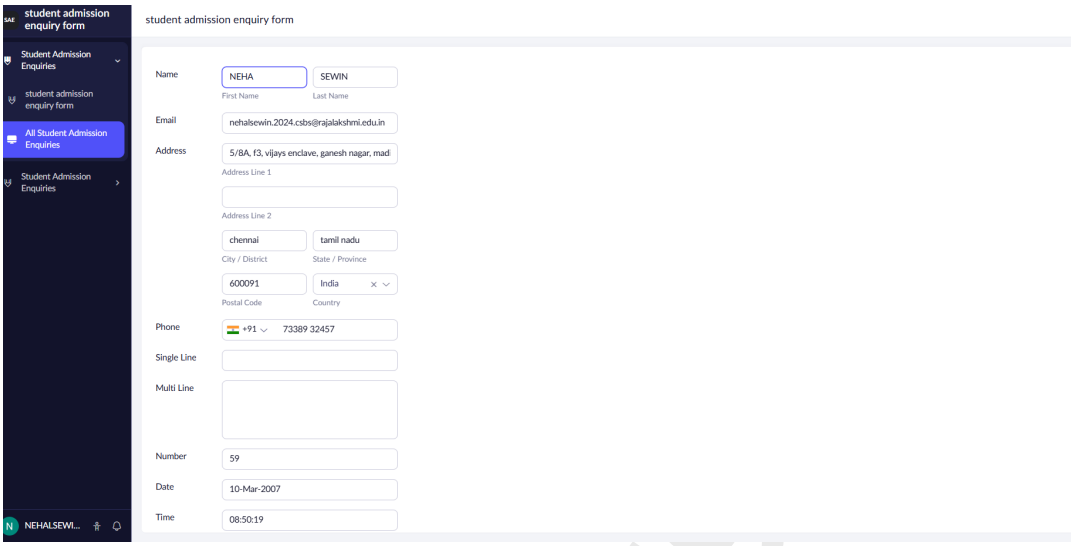

Fig 3. Live form preview showing Name, Email, Address, Phone, Number, Date and Time filled

3. Live Form Preview — Preferences and Submission

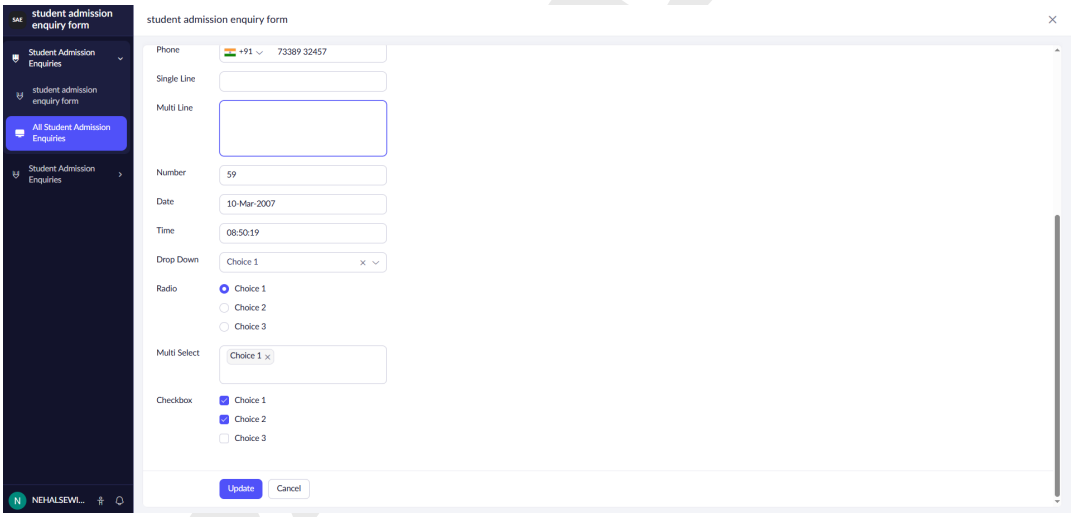

Fig 4. Live form preview showing Drop Down, Radio, Multi Select and Checkbox selections before Submit

4. Report View — Submitted Registration Record

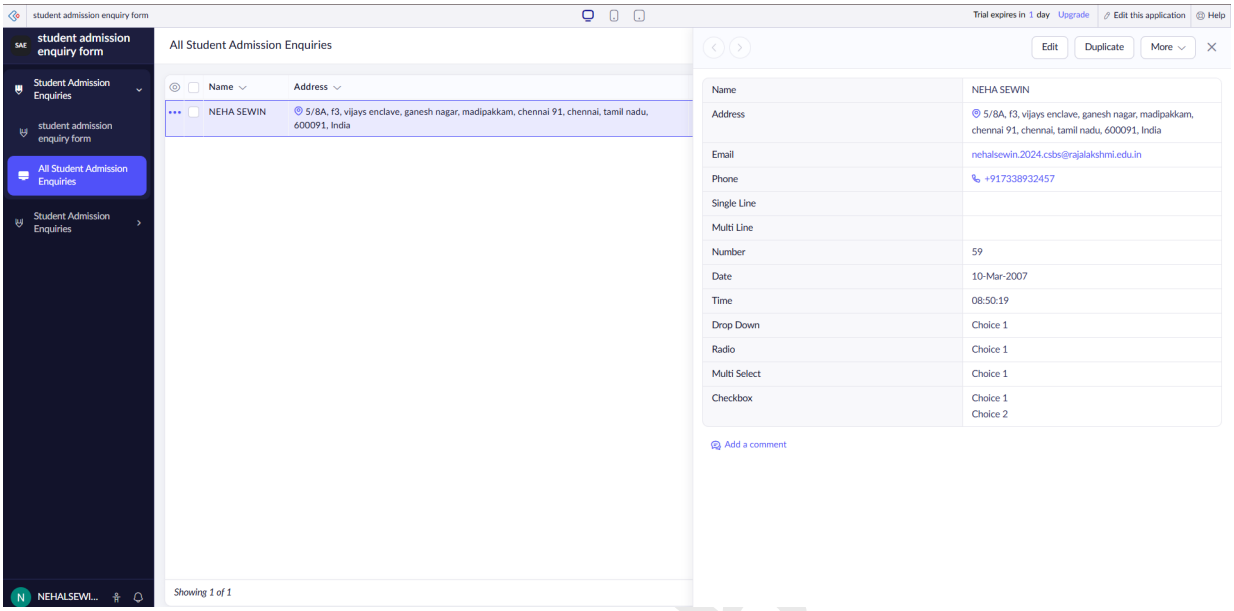

Fig 5. Event_Registration_Report showing the submitted record with values mapped to each field

RESULT

An Event Registration Form application was successfully designed and built in Zoho Creator using all thirteen Basic Fields — Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox. The fields were logically grouped into four sections through drag-and-drop, mandatory and format-level validations were configured successfully, and the Event_Registration_Report was verified to correctly capture and list participant registration data submitted through the form. The exercise thus demonstrated an understanding of data modelling and low-code form design for a real business use case.
