AUTOMATING BUSINESS PROCESSES USING DELUGE

SCRIPTING AND WORKFLOWS

Aim:

To design and develop a **Student Admission Enquiry Management** application in Zoho Creator and automate the admission enquiry process using **Deluge scripting and workflows**, followed by application testing and debugging.

Objective:

The objectives of this experiment are:

- To create a structured student admission enquiry form in Zoho Creator.
- To use the thirteen Basic Fields available in the Zoho Creator Form Builder.
- To configure mandatory fields and field-level validations.
- To create a report for storing and reviewing submitted admission enquiries.
- To create a workflow that executes automatically when an enquiry is submitted.
- To use Deluge scripting for processing and validating form data.
- To configure an automated confirmation email for the applicant.
- To test the application using valid and invalid inputs.
- To debug the application and verify the workflow execution.

241401059

Procedure:

Step 1: Create the Application

1. Open Zoho Creator and sign in.
2. Create a new application.
3. Enter the application name as Student Admission Enquiry Management.
4. Create the application.

Step 2: Create the Admission Enquiry Form

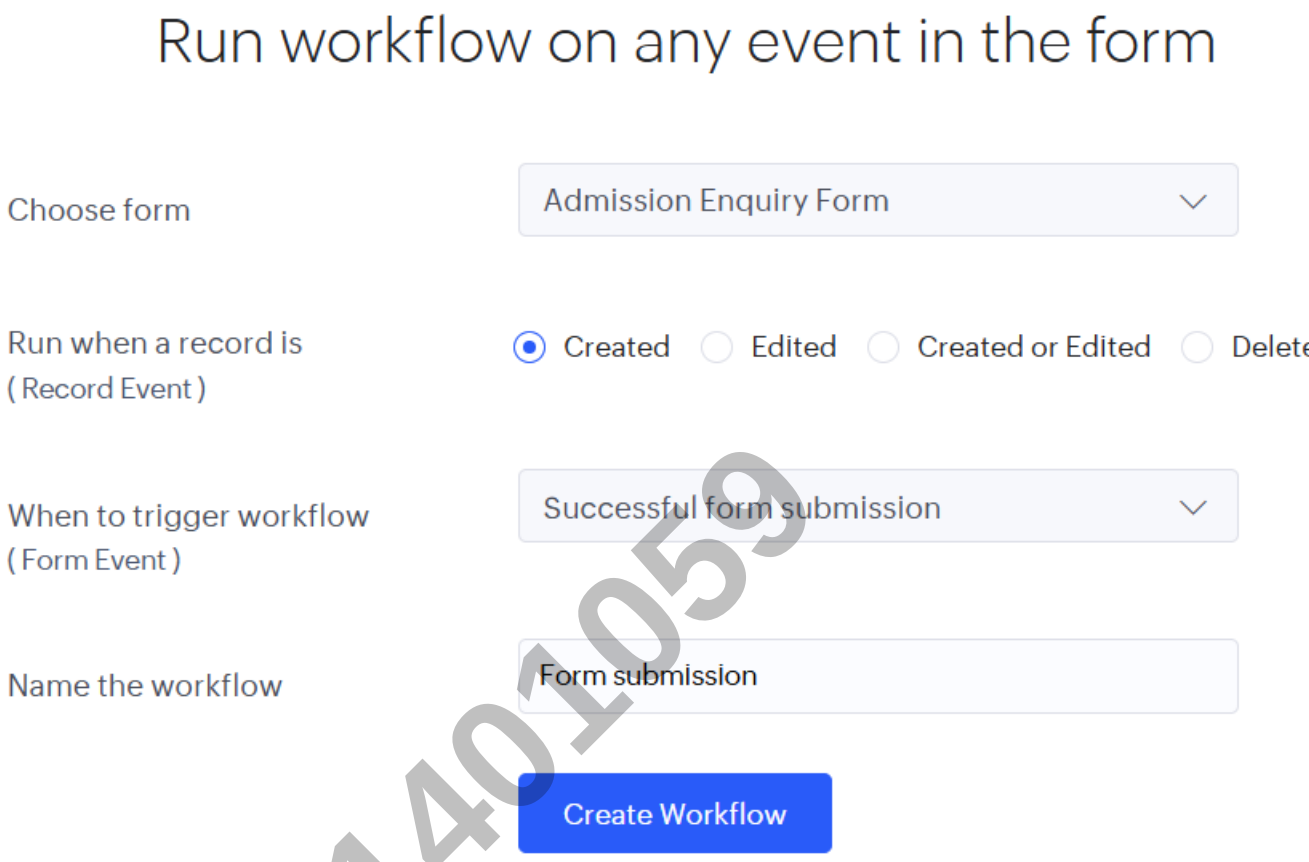

1. Create a new form named Admission_Enquiry_Form.
2. Add the required Basic Fields.
3. Configure each field according to its purpose.

Step 3: Create the Workflow

1. Open the **Workflows** section of the application.
2. Create a new workflow for **Admission_Enquiry_Form**.

3. Select the event that occurs when a new record is successfully submitted.
4. Configure the workflow to execute automatically after form submission.

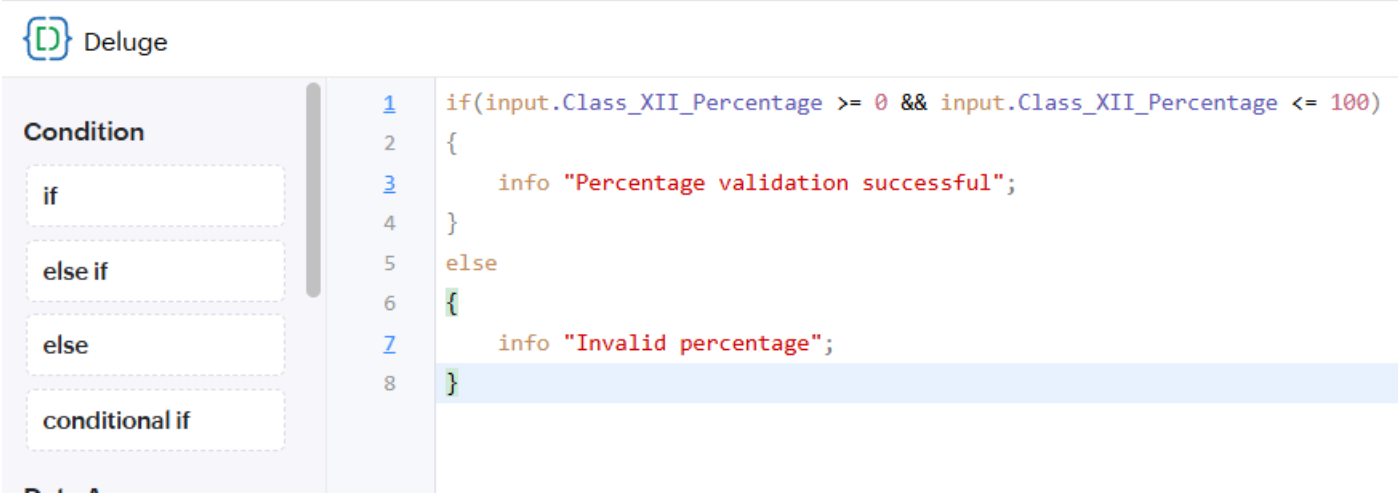

The workflow is used to automate the processing of the submitted admission enquiry.

24140159

Step 4: Add the Deluge Script

1. Add a **Deluge Script** action inside the workflow.
2. Use the correct **Link Names** of the form fields.
3. Write the required logic to process the submitted information.
4. Use info statements during testing to display and verify field values.

Step 5: Configure the Automated Email

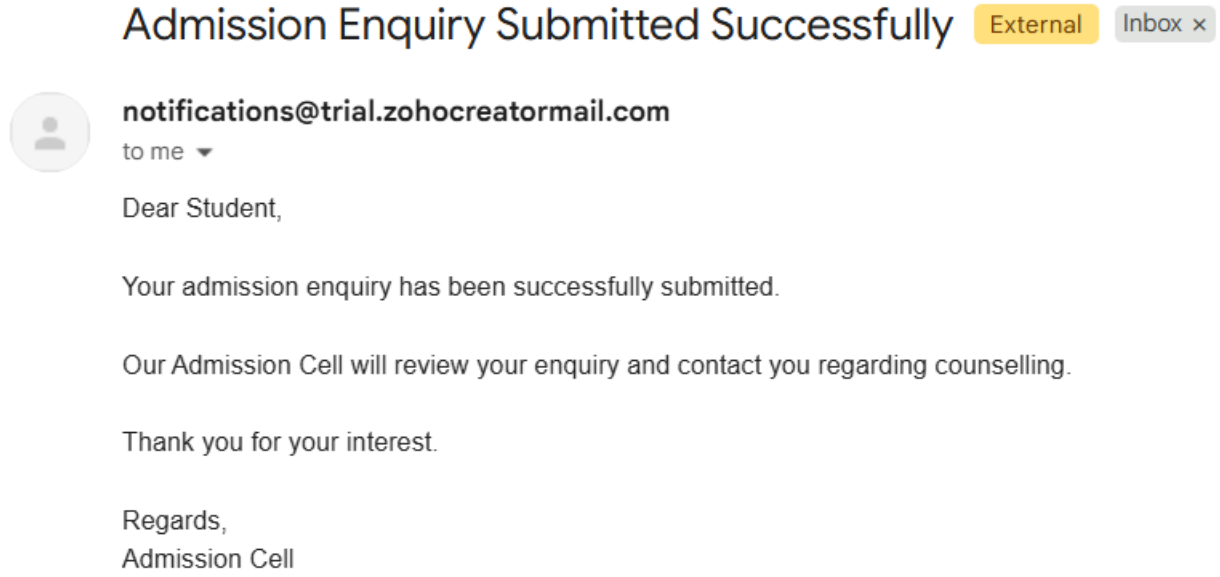

1. Add an **Email Notification** action to the workflow.
2. Set the recipient as the applicant's **Email Address**.
3. Enter the subject as:

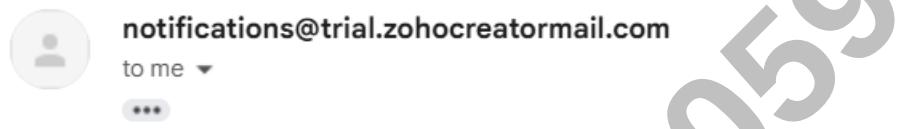

Admission Enquiry Submitted Successfully

4. Enter a suitable confirmation message.
5. Save the workflow.

The workflow automatically sends a confirmation email to the applicant after successful submission.

Step 6: Test the Application with Valid Data

1. Open the live preview of the form.
2. Enter valid student information.
3. Fill all the required fields.
4. Accept the Terms & Privacy Policy.
5. Click **Submit**.
6. Verify that the record is successfully created.
7. Verify that the workflow executes and the confirmation email is sent.
8. Check that the submitted record appears in **Admission_Enquiry_Report**.

Step 7: Test the Application with Invalid Data

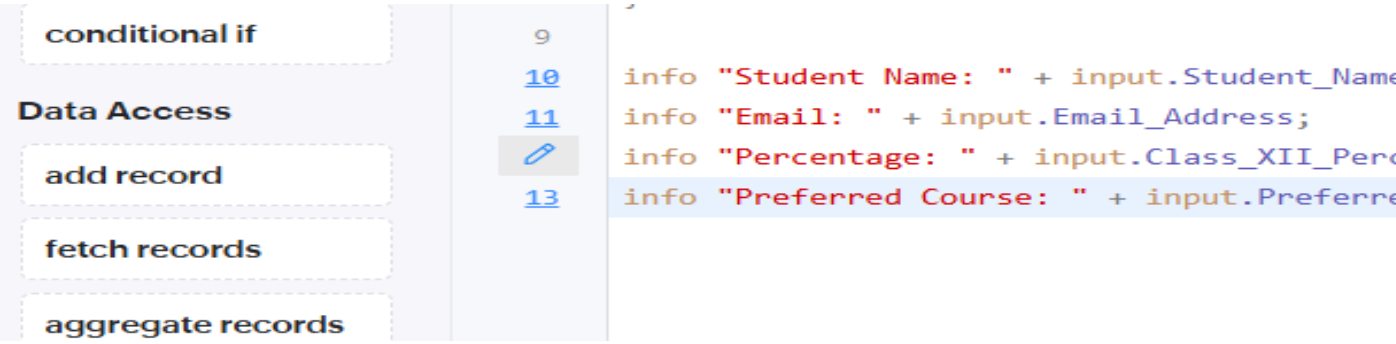

Test the application using invalid inputs such as:

- Entering a percentage greater than **100**.
- Entering an invalid email address.
- Selecting a future date for Date of Birth.
- Leaving mandatory fields empty.
- Leaving the Terms Agreement checkbox unchecked.

The application should reject invalid inputs according to the configured validation rules.

Step 8: Debug the Application

1. If the workflow does not work correctly, check the Deluge script.
2. Verify that the correct field **Link Names** are used.
3. Add info statements to check the values received by the workflow.

Step 9: Verify the Final Application

1. Submit at least **three sample admission enquiries**.
2. Open **Admission_Enquiry_Report**.
3. Verify that all submitted records are displayed.
4. Confirm that the workflow executes successfully.
5. Confirm that the automated confirmation email is generated.
6. Verify that the application handles invalid inputs correctly.

The assignment specifically requires the final submission to show the Form Builder, live preview, and at least three submitted records in the report.

241401059

Result:

Thus, the Student Admission Enquiry Management application was successfully developed and automated in Zoho Creator using Deluge scripting and workflows. The application was tested with valid and invalid inputs, debugging was performed using info statements, and the submitted admission enquiries were successfully processed and displayed in the report.
