Experiment 7 – Integrating Zoho Creator with Zoho CRM

Neha L Sewin | 241401059 | B.Tech Computer Science and Business System

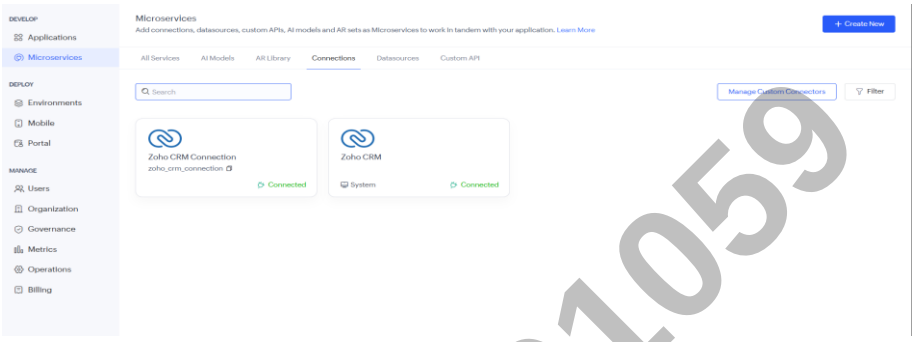

Aim

To integrate a Zoho Creator application with Zoho CRM using a connection and Deluge API, and transfer student admission enquiry details from Zoho Creator to the CRM Leads module.

Procedure

1. Create Zoho CRM Connection

- Open Microservices → Connections in Zoho Creator.
- Select Zoho CRM and create a new connection.
- Authorize the Zoho CRM account and enable the connection for the application.

2. Configure Form Workflow

- Open the Admission Enquiry Form workflow.
- Select Successful Form Submission as the trigger.
- Add a Deluge Script action to the workflow.

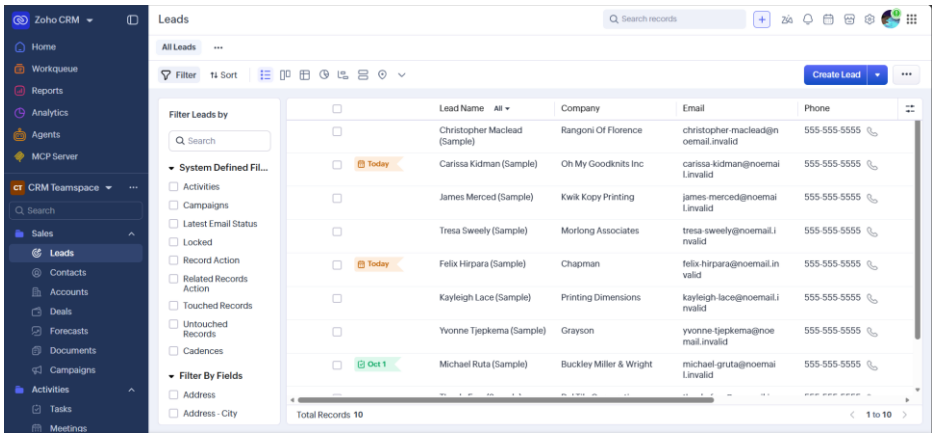

3. Prepare Student Details

- Create a map to store the student admission details.
- Map fields such as Student Name, Email, Phone, and Preferred Course.
- Use the corresponding Creator form field values as inputs.

4. Send Data to Zoho CRM

241401059

- Use the zoho.crm.v8.createRecord() Deluge task.
- Select the Leads module in Zoho CRM.
- Use the created connection to send the student details to CRM.

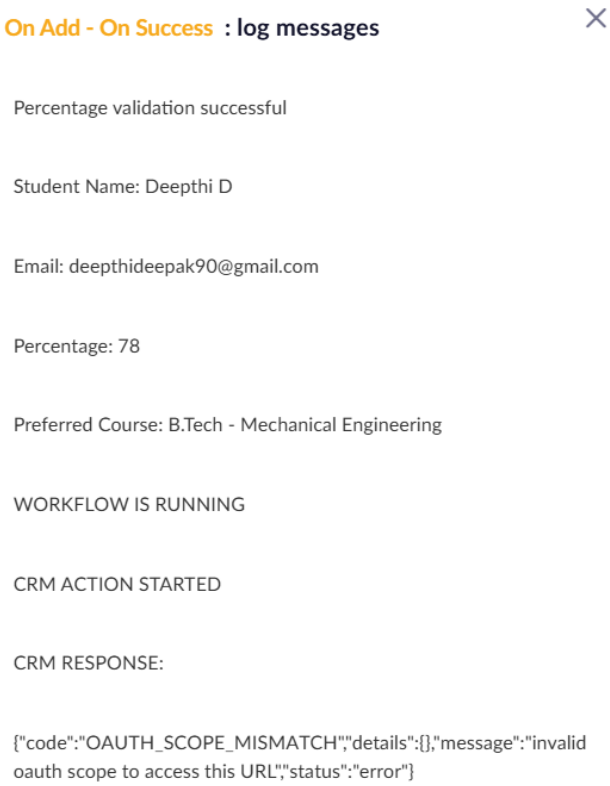

5. Test the Integration

- Submit a sample record through the Admission Enquiry Form.
- Check the workflow log to verify that the CRM action is executed.
- Verify whether the record is created in the Zoho CRM Leads module.

6. Verify the Result

- Check the workflow execution messages.
- Confirm that the CRM API returns a response.
- If authorization is valid, the submitted data is transferred to Zoho CRM automatically.

24140159

Result

The **Zoho Creator application was successfully connected to Zoho CRM using a connection and Deluge API integration**. The admission enquiry workflow executed successfully and attempted to create a Lead in Zoho CRM. During testing, an **OAuth scope mismatch** was encountered, so the CRM connection requires reauthorization for successful record transfer.
